# YAKABOD VENDOR SECURITY REVIEW MANAGER

KEEP VENDOR RISKS AT BAY

MANAGING THE RISE OF THIRD-PARTY SOFTWARE

Modern enterprises are rapidly expanding their use of cloud-based SaaS products and other solutions. If not properly vetted, each piece of new software represents potentially unacceptable risks and vulnerabilities that could be exploited. When purchasing many products from new vendors, CISOs, risk management leaders, and information security teams must find a way to evaluate them in a systematic and scalable way.

Yakabod's Vendor Security Review (VSR) Manager keeps you in control of your growing security evaluation volume.

CONFIDENTIALITY FOR EVERY REVIEW

Keep your evaluations on a need-to-know basis. Take advantage of standards that were designed for the most rigorous national security use cases. Yakabod's Vendor Security Review Manager ensures compliance and keeps you ready for an audit, protects sensitive data in one central location, stays compliant with vendor NDAs, and reduces the potential for disclosing vulnerabilities and risks.

- Hardened appliance with two-factor authentication
- Granular access controls
- Out-of-band communication
- System-of-record functionality including audit trails

LEAVE NO STONE UNTURNED

Track and manage each review in a comprehensive record designed for your organization. The VSR Manager ensures that you see every detail for every vendor.

- Connect each review with its associated data and documents
- Manage review and renewal workflows
- See all reviews at a glance or dive deep into a specific vendor
- Search and sort in-process reviews

SET YOUR REVIEW PROCESS ON AUTOPILOT

The VSR Manager helps you get through your queue with speed and accuracy. Automate repetitive tasks and streamline manual processes.

Customizable Reports + Dashboards

Turnkey Setup

Automated Renewal Notifications

Easily Ingests Data

GAIN CONTROL OF INCREASING SECURITY EVALUATION

Colleges and universities are rapidly expanding use of 3rd-party cloud SaaS and other software including those that store sensitive, regulated information. With rising breaches, increased risks, legislation, regulation, and audits, higher ed information security teams face a growing – and often overwhelming – demand for vendor security evaluations.

BUILT-IN COLLABORATION

Yakabod VSR provides a secure place to track and manage the process for each vendor/product security evaluation including data collection, assessment, and approval.

◆ Comprehensive review records centralize and organize all review data and documentation including questionnaires, SOC2 reports and other vendor-provided documentation.

◆ Automated workflows support efficient handling of review processes including timely reminders of deadlines and pending renewals.

◆ Intelligence-agency technologies protect sensitive institution and vendor security architecture, risk, vulnerability, and similar data.

◆ Dashboards and reports support management of the overall review process, allocation of resources, and reporting on workload and accomplishments to leadership.
